## Language

- German
- English (Advanced)

## EXPERTISE

- Formpipe Lasetnet
- D365 FO / CE
- AX 2012
- SAP
- Docker
- Coding in multiple languages
- Azure
- Training

## Experience

### Arineo GmbH

#### November 2019 - Present

After rocking it for 11 years at seccion, I was ready for a change. Thanks to my Lasetnet/AX 2012/D365 FO Community rep, I snagged projects from Austria and Switzerland to the USA, even dropping some Lasetnet knowledge bombs there. This paved the way for a killer gig at Arineo GmbH. It wasn't just about the fat paycheck; it was about getting a seat at the table, shaping things up. Arineo rolls as a "collegial organization" GmbH, no old-school department heads; tasks are spread based on expertise. Besides being the Lasetnet maestro, I took charge of internal training, recruiting, and repping the squad.

On top of that, in the last 4 years, I've dived into a bunch of new tech. Now, I'm cruising with confidence in all sorts of infrastructures.

### dreis.dev-ELOPMENT

#### October 2017 - Present

As a lone wolf freelancer, I kicked off my gig as an iOS app wizard, mastering Swift on my own terms. Linked up with a sales sidekick, we dropped a shopping app on the iOS Store. Cool vibes, right? But, dang, it hit a few bumps and got overshadowed by tech moves like Google Lens.

Shifted gears, turned my hobby into cash by slaying a Docker-based Nextcloud and Enpass system for a local player. Now, Lasetnet projects got me hooked, shouts out to the old crew hitting me up. While I'm deep into the Lasetnet game, I'm still rocking the support for my OG clients, keeping the hustle alive from the early days.

## Responsibilities

- Consulting Lasernet Architecture
- Building Workflows
- Setting up Lasetnet environments
- Creating document templates
- Create interfaces
- Edit metadata
- Train Lasetnet EN/GER
- Solving issues
- Migrate old Lasetnet version
- Out of the box thinking
- Getting everything out of Lasetnet
- Keeping tight contact with the product owner of
  - Lasetnet
  - Lasetnet AX Connector

## Experience

### secion GmbH

#### July 2008 - October 2019

During my stint at secion GmbH, I kicked off with an apprenticeship, climbing the ladder from system integrator to the Lasetnet crew. Check this: I even solo'd a new Active Directory setup for a client during the switch.

In those initial four years, I went all-in for Panasonic Europe, being the Lasetnet maestro for the entire continent. From fixing glitches and tweaking stuff to handling big projects and migrations across Europe – I was on it. Plus, I had the back of various clients, sorting out different issues.

Then, things got real interesting with a slick partnership with Lasetnet big shots Formpipe. My gig started tilting heavy towards AX 2012 projects. Eventually, I was deep into solo missions, juggling individual AX 2012 integrations until my time at secion wrapped up.

## Education

Vocational training as an IT specialist for system integration 2008-2011

Technical assistant for computer science 2006-2008

## Skills Summary

Lasernet Architect	<div style="width: 86%;"><div style="width: 86%;"></div></div>	86 %
